Ions in Solutions

Ionization Equation

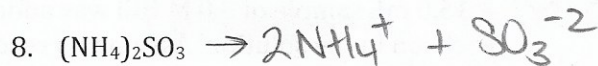

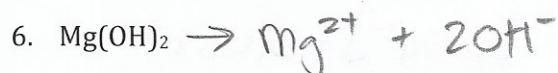

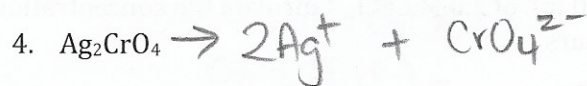

- Represents the salt breaking apart into ions.

- If the salt were  $\text{CaCl}_2$ .

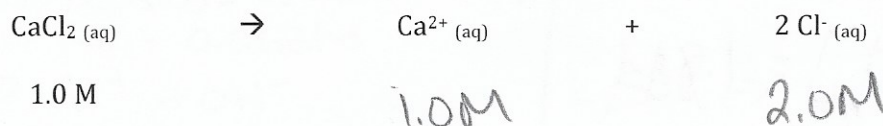

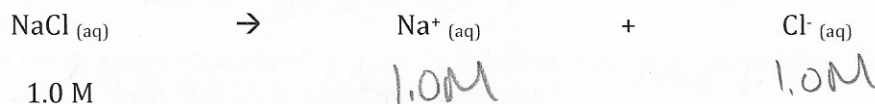

Practice:

Calculating Concentration

- Mole ratios represent the relative amounts of ions in solution.

**Practice:**

$$[\text{K}^+] = 0.25 \text{ M}$$

$$[\text{OH}^-] = 0.25 \text{ M}$$

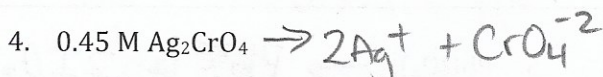

$$[\text{Sr}^{2+}] = 0.75 \text{ M}$$

$$[\text{Cl}^-] = 2(0.75) = 1.5 \text{ M}$$

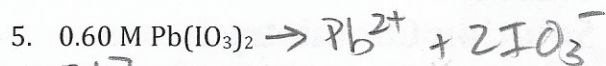

$$[\text{NH}_4^+] = 0.20 \text{ M}$$

$$[\text{NO}_3^-] = 0.20 \text{ M}$$

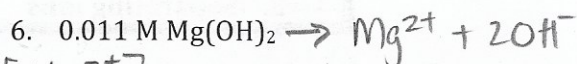

$$[\text{Ag}^+] = 2(0.45) = 0.90 \text{ M}$$

$$[\text{CrO}_4^{2-}] = 0.45 \text{ M}$$

$$[\text{Pb}^{2+}] = 0.60 \text{ M}$$

$$[\text{IO}_3^-] = 2(0.60) = 1.2 \text{ M}$$

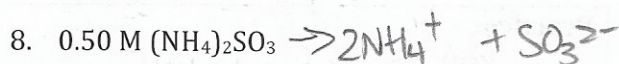

$$[\text{Mg}^{2+}] = 0.011 \text{ M}$$

$$[\text{OH}^-] = 2(0.011) = 0.022 \text{ M}$$

$$[\text{Ba}^{2+}] = 0.45 \text{ M}$$

$$[\text{CO}_3^{2-}] = 0.45 \text{ M}$$

$$[\text{NH}_4^+] = 2(0.50) = 1.0 \text{ M}$$

$$[\text{SO}_3^{2-}] = 0.50 \text{ M}$$

**Ionization + Dilution**

- ✓ A 15.0 mL sample of 3.0 M HCl was added to 10.0 mL of 2.0 M CaCl<sub>2</sub>. Calculate the concentration of each ion in the solution. Assume no reaction occurs.

**[HCl]**

$$C_1V_1 = C_2V_2$$

$$(3.0)(15.0) = C_2(25.0)$$

$$C_2 = 1.8 \text{ M}$$

**[CaCl<sub>2</sub>]**

$$C_1V_1 = C_2V_2$$

$$(2.0)(10.0) = C_2(25.0)$$

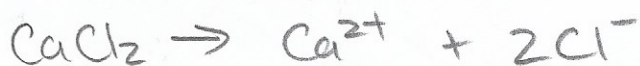

$$C_2 = 0.80 \text{ M}$$

$$1.8 \text{ M}$$

$$1.8 \text{ M}$$

$$1.8 \text{ M}$$

$$0.80 \text{ M}$$

$$0.80 \text{ M}$$

$$(0.80) \times 2 = 1.6 \text{ M}$$

$$[\text{H}^+] = 1.8 \text{ M}$$

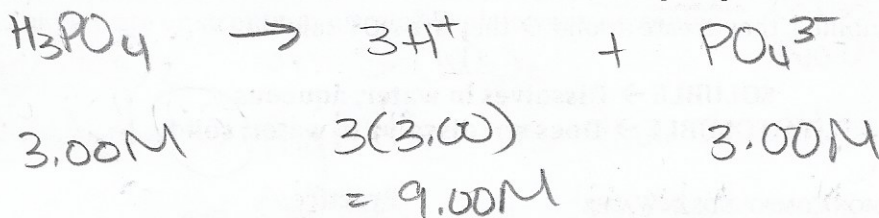

$$[\text{Ca}^{2+}] = 0.80 \text{ M}$$

$$[\text{Cl}^-] = 1.8 \text{ M} + 1.6 \text{ M} = 2.4 \text{ M}$$

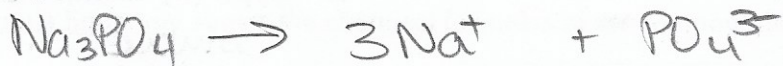

**Practice 1.**

What are the concentrations of both ions in a 3.00 M solution of phosphoric acid?

**Practice 2.**

What is the sodium ion concentration when 250.0 mL of water is added to 125.5 mL of a 3.21 M solution of sodium phosphate?

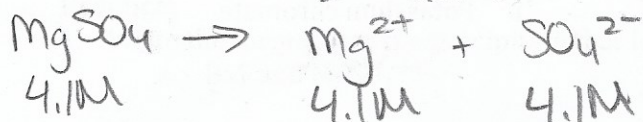

$$\begin{aligned} C_1V_1 &= C_2V_2 \\ (3.21)(125.5) &= C_2(250.0 + 125.5) \\ C_2 &= 1.07\text{M} \end{aligned}$$

$$\begin{aligned} [\text{Na}^+] &= 3(1.07) \\ &= 3.21\text{M} \end{aligned}$$

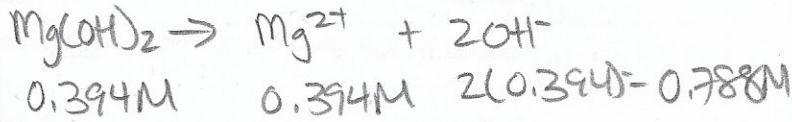

**Practice 3.**

Determine the concentration of each ion when 45.0 mL of 7.2 M magnesium sulphate is mixed with 35.0 mL of 0.900 M magnesium hydroxide.

$$\begin{aligned} [\text{MgSO}_4] \quad C_1V_1 &= C_2V_2 \\ (7.2)(45.0) &= C_2(80.0) \\ C_2 &= 4.1\text{M} \end{aligned}$$

$$\begin{aligned} [\text{Mg(OH)}_2] \quad C_1V_1 &= C_2V_2 \\ (0.900)(35.0) &= C_2(80.0) \\ C_2 &= 0.394\text{M} \end{aligned}$$

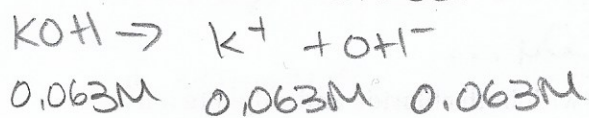

$$[\text{Mg}^{2+}] = 4.1\text{M} + 0.394\text{M} = 4.5\text{M} \quad [\text{SO}_4^{2-}] = 4.1\text{M} \quad [\text{OH}^-] = 0.788\text{M}$$

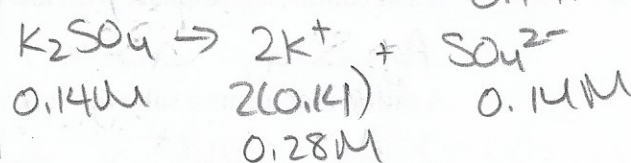

**Practice 4.**

What is the molar concentration of each ion in solution resulting from mixing 55.0 mL of 0.15 M potassium hydroxide with 75.0 mL of 0.25 M potassium sulphate?

$$\begin{aligned} [\text{KOH}] \quad C_1V_1 &= C_2V_2 \\ (0.15)(55.0) &= C_2(130.0) \\ C_2 &= 0.063\text{M} \end{aligned}$$

$$\begin{aligned} [\text{K}_2\text{SO}_4] \quad C_1V_1 &= C_2V_2 \\ (0.25)(75.0) &= C_2(130.0) \\ C_2 &= 0.14\text{M} \end{aligned}$$

$$\begin{aligned} [\text{K}^+] &= 0.063 + 0.28\text{M} \\ &= 0.34\text{M} \end{aligned}$$

$$\begin{aligned} [\text{OH}^-] &= 0.063\text{M} \\ [\text{SO}_4^{2-}] &= 0.14\text{M} \end{aligned}$$

## Solubility Table

When some ions are combined, they create a solid → they are NOT soluble.

**SOLUBLE** → Dissolves in water; aqueous  
**LOW SOLUBLE** → Does not dissolve in water; solid

### SOLUBILITY OF COMMON COMPOUNDS IN WATER

The term soluble here means > 0.1 mol/L at 25°C.

Negative Ions (Anions)	Positive Ions (Cations)	Solubility of Compounds
All	Alkali ions: Li <sup>+</sup> , Na <sup>+</sup> , K <sup>+</sup> , Rb <sup>+</sup> , Cs <sup>+</sup> , Fr <sup>+</sup>	Soluble
All	Hydrogen ion: H <sup>+</sup>	Soluble
All	Ammonium ion: NH <sub>4</sub> <sup>+</sup>	Soluble
Nitrate, NO <sub>3</sub> <sup>-</sup>	All	Soluble
Chloride, Cl <sup>-</sup> or Bromide, Br <sup>-</sup> or Iodide, I <sup>-</sup>	All others	Soluble
	Ag <sup>+</sup> , Pb <sup>2+</sup> , Cu <sup>+</sup>	Low Solubility
Sulphate, SO <sub>4</sub> <sup>2-</sup>	All others	Soluble
	Ag <sup>+</sup> , Ca <sup>2+</sup> , Sr <sup>2+</sup> , Ba <sup>2+</sup> , Pb <sup>2+</sup>	Low Solubility
Sulphide, S <sup>2-</sup>	Alkali ions, H <sup>+</sup> , NH <sub>4</sub> <sup>+</sup> , Be <sup>2+</sup> , Mg <sup>2+</sup> , Ca <sup>2+</sup> , Sr <sup>2+</sup> , Ba <sup>2+</sup>	Soluble
	All others	Low Solubility
Hydroxide, OH <sup>-</sup>	Alkali ions, H <sup>+</sup> , NH <sub>4</sub> <sup>+</sup> , Sr <sup>2+</sup>	Soluble
	All others	Low Solubility
Phosphate, PO <sub>4</sub> <sup>3-</sup> or Carbonate, CO <sub>3</sub> <sup>2-</sup> or Sulphite, SO <sub>3</sub> <sup>2-</sup>	Alkali ions, H <sup>+</sup> , NH <sub>4</sub> <sup>+</sup>	Soluble
	All others	Low Solubility

### Practice:

1. Classify the following salts as being soluble or having low solubility in water:

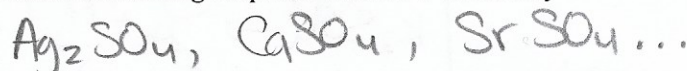

- Copper (II) chloride  $\text{CuCl}_2$   
Soluble
- Aluminum hydroxide  
Low Solubility
- Sodium phosphate  
Soluble
- Calcium sulphate  
Low Solubility
- Iron (II) sulphide  
Low Solubility
- Strontium hydroxide  
Soluble
- Zinc bromide  
Soluble
- Cesium sulphite  
Soluble
- Potassium chromate  
Soluble

2. Write the formula for the following:

- a. A salt containing carbonate that is soluble

- b. A salt containing sulphate with low solubility

- c. A cation that forms a salt with low solubility with both chloride and sulphate ions

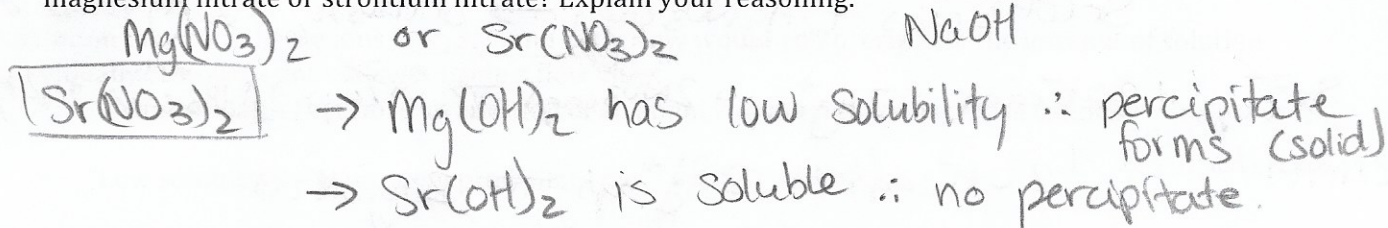

- d. An anion that forms soluble salts with all cations

3. A student is given a sample of either magnesium nitrate or strontium nitrate. When a few drops of a solution of sodium hydroxide is added to the sample, no precipitate forms. Does the sample contain magnesium nitrate or strontium nitrate? Explain your reasoning.

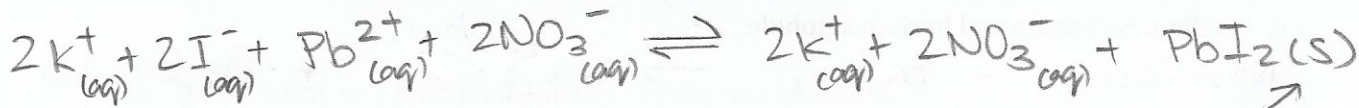

### Types of chemical equations:

**Formula Equation:** shows the chemical formulas of the compounds and their states.

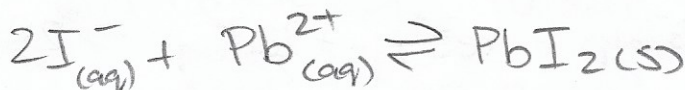

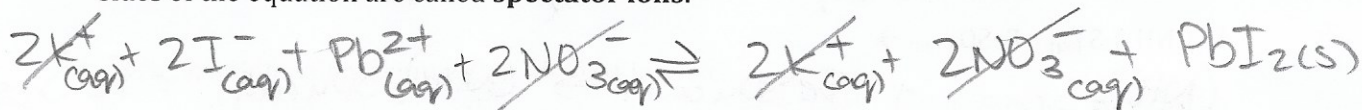

(show ions for all except solid)

**Complete Ionic Equation:** shows the soluble salts represented in their dissociated form.

need to indicate solid

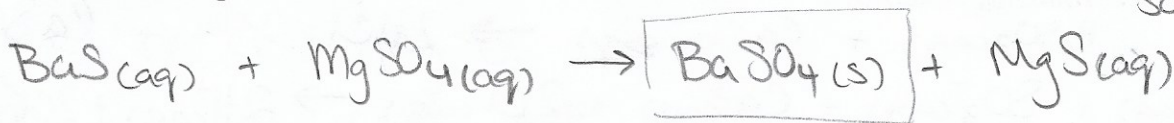

**Net Ionic Equation:** shows only the ions that take part in the reaction. Ions that are the same on both sides of the equation are called **spectator ions**.

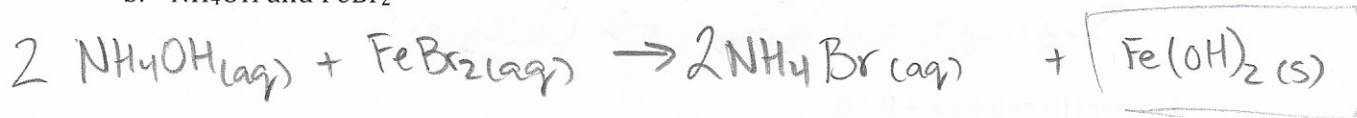

### Practice:

1. Write the formula for the precipitate that forms when the following solutions are mixed:

a.  $BaS$  and  $MgSO_4$

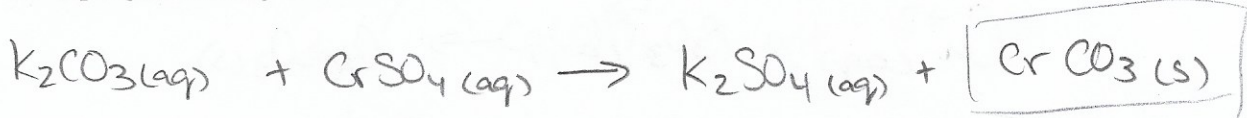

b.  $NH_4OH$  and  $FeBr_2$

c.  $H_3PO_4$  and  $ZnCl_2$

d.  $K_2CO_3$  and  $CrSO_4$

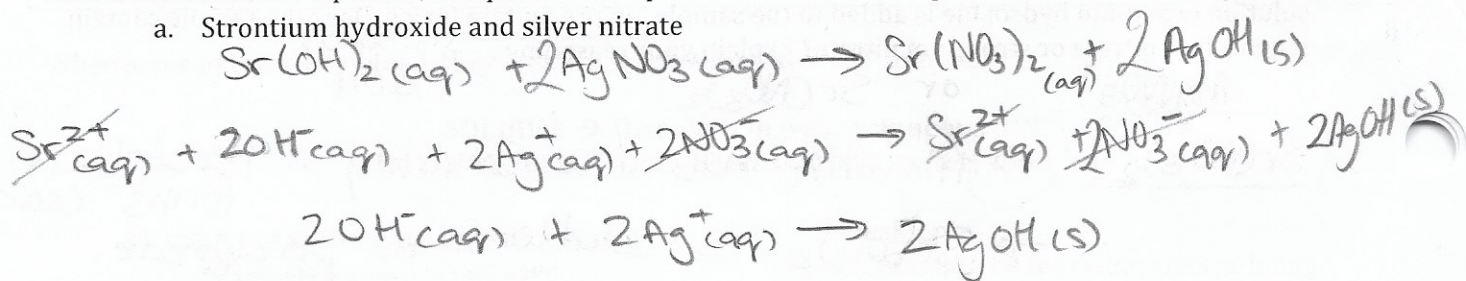

e.  $MnI_2$  and  $Sr(OH)_2$

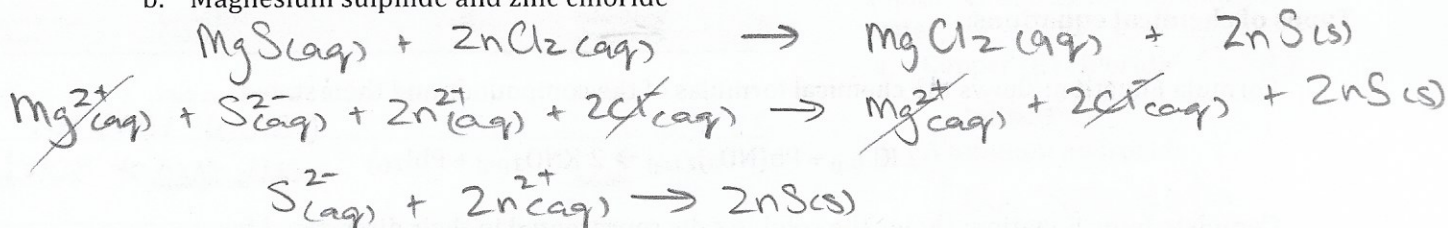

\*always double check solubility!

2. Write a formula equation, complete ionic equation and net ionic equation for the following reactions:

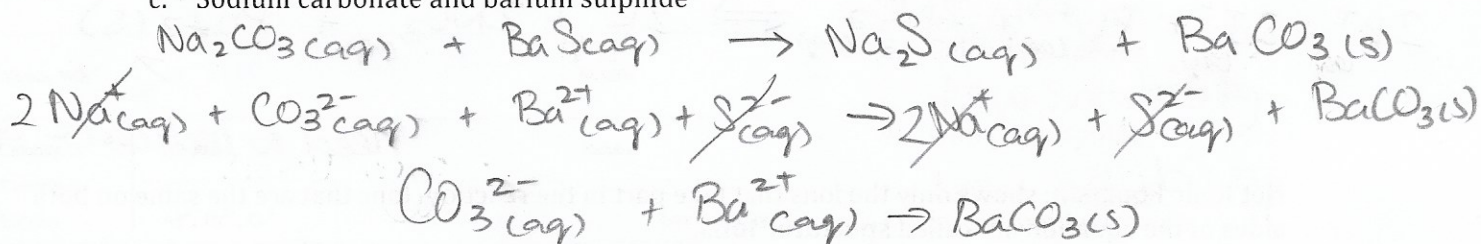

a. Strontium hydroxide and silver nitrate

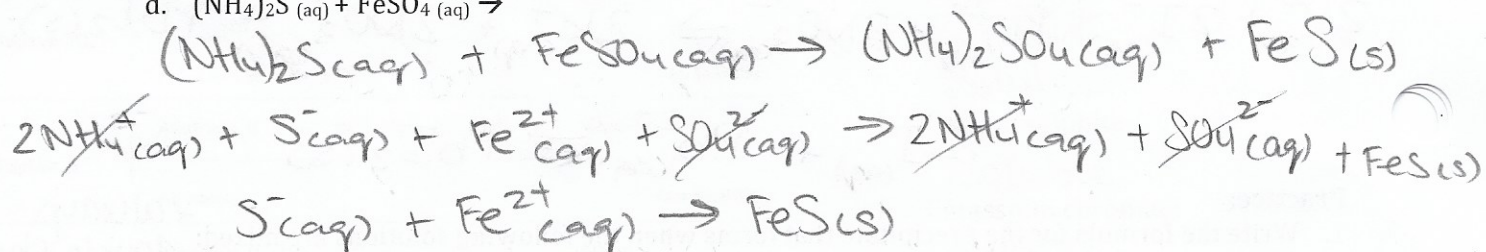

b. Magnesium sulphide and zinc chloride

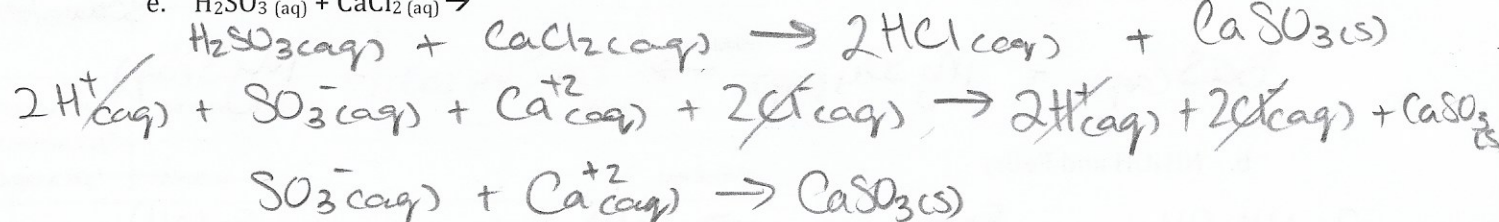

c. Sodium carbonate and barium sulphide

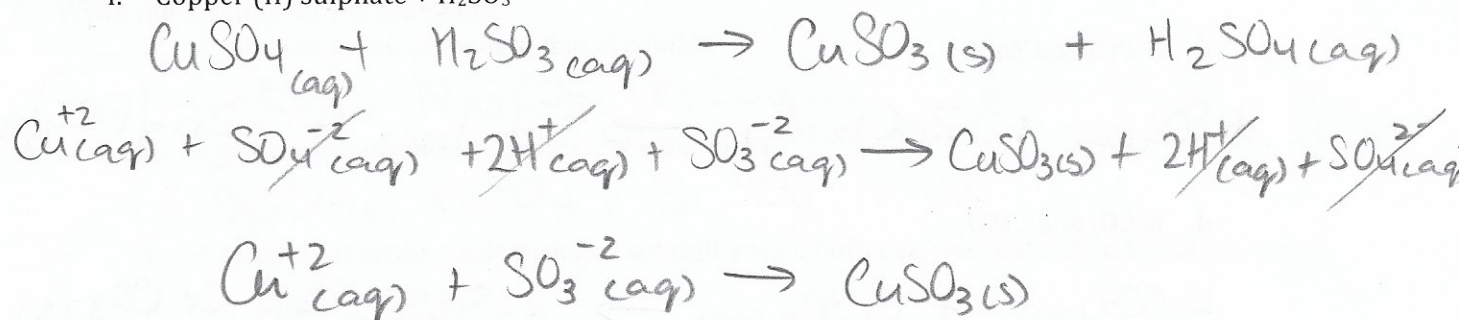

d.  $(\text{NH}_4)_2\text{S}(\text{aq}) + \text{FeSO}_4(\text{aq}) \rightarrow$

e.  $\text{H}_2\text{SO}_3(\text{aq}) + \text{CaCl}_2(\text{aq}) \rightarrow$

f. Copper (II) sulphate +  $\text{H}_2\text{SO}_3$

## Separating Ions

### Example:

A solution may contain the ions  $\text{Ca}^{2+}$ ,  $\text{Sr}^{2+}$  and  $\text{Zn}^{2+}$ . How would you precipitate the ions out of solution individually? Describe your answer using a flow chart.

- All are cations - therefore an addition of an anion will precipitate out these cations.
- "Low solubility" - means will precipitate out. (form solid)  $\rightarrow$  \* 1 at a time!

1. Which <sup>(-ve)</sup> anion will precipitate just one of the ions out first?

$\text{S}^{2-}$  will cause  $\text{Zn}^{2+}$  to turn solid

a. Which ions are left?

$\text{Ca}^{2+}$ ,  $\text{Sr}^{2+}$

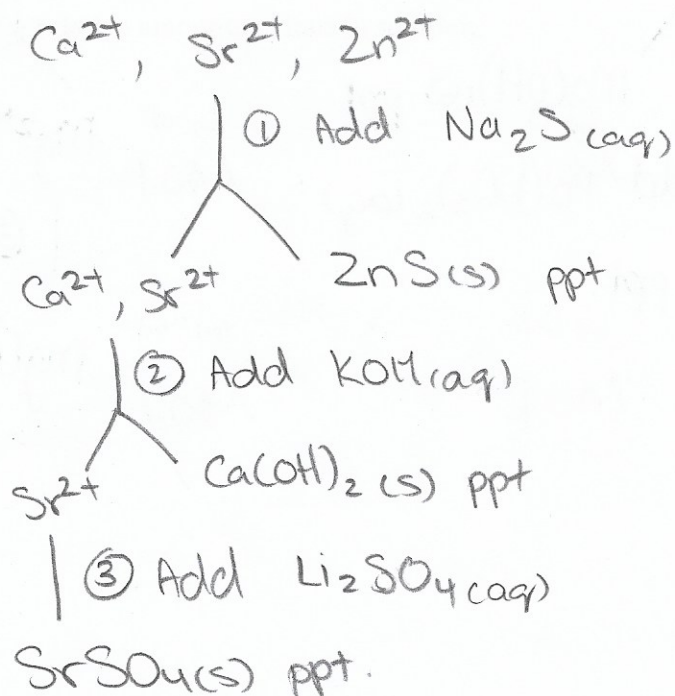

2. Which anion will precipitate just one of the two ions left?

$\text{OH}^-$  will cause  $\text{Ca}^{2+}$  to turn solid

3. Which anion will precipitate out the last ion left?

$\text{SO}_4^{2-}$  will cause  $\text{Sr}^{2+}$  to turn solid.

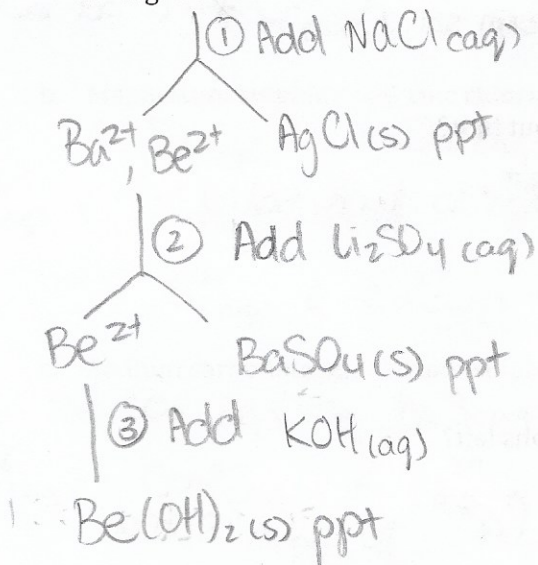

\* All ions added need to be added with a spectator ion, making what you add stay aqueous.

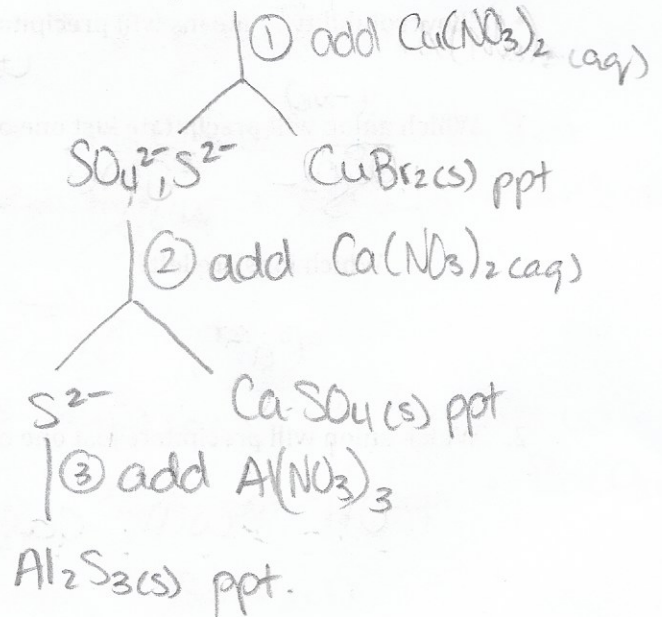

**Practice:**

1. For each of the following solutions, describe a process to individually remove each ion. Be sure to list the compounds that you add in order, and the method of removing the precipitate. You may wish to use a flow chart.

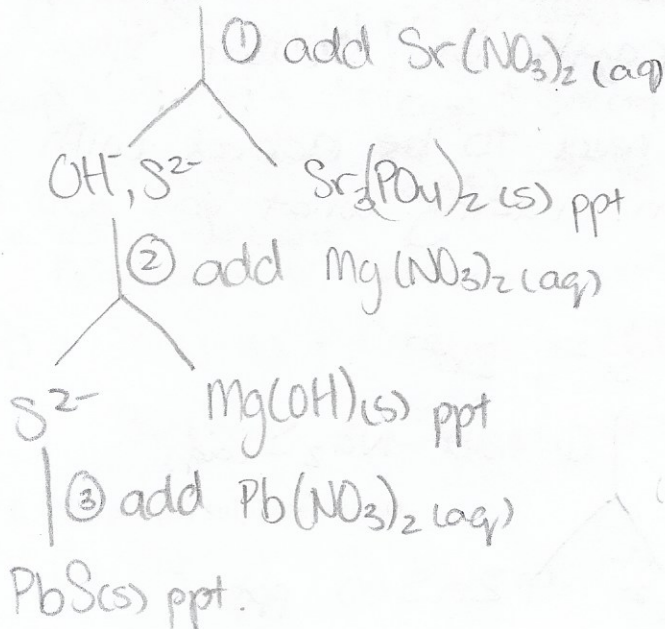

a.  $\text{Ag}^+$ ,  $\text{Ba}^{2+}$  and  $\text{Be}^{2+}$

b.  $\text{Br}^-$ ,  $\text{SO}_4^{2-}$  and  $\text{S}^{2-}$

c.  $\text{OH}^-$ ,  $\text{PO}_4^{3-}$  and  $\text{S}^{2-}$

d.  $\text{Cr}^{3+}$ ,  $\text{Ca}^{2+}$  and  $\text{Mg}^{2+}$
